Introduction

TransTech's Pavement Quality Indicator Model 380 (PQI 380) utilizes state of the art technology to get accurate asphalt pavement density readings. It's primary features are:

- No special license or radioactive materials required.
- Lightweight and easy to use.
- 12 hours of portable operation.
- Measures density in common units (pcf or kg/m³).
- Relative moisture detection and correction when necessary.
- Stores infinite records.
- Data download via USB flash drive (semicolon delimited text file format).

Measurement Technology

The PQI 380 uses Impedance Spectroscopy to measure the electrical response of asphalt from which the density is calculated. As shown in the Comsol simulation below, the electrical field transmits through the material from the sensor plate of the PQI. The impedance is then measured and used in the calculation of the density for that specific aggregate.

Application Summary

The PQI 380 is intended primarily for use on newly-laid asphalt pavements with lift thickness ranging from 0.75 inches to 6 inches. The calibration of the PQI 380 to a density standard (core) is very important for the reliability and consistency of the density measurements for each material.

Safety

Every effort has been made to make the Pavement Quality Indicator convenient to use and inherently safe. The PQI uses non-nuclear, low-voltage direct current to obtain measurements, therefore, there are no badges, licensing, storage or transport concerns. Like any instrument, however, the user should exercise care and common sense in its use to prevent mishaps.

Warning

**Do not use the unit on or near electrical wiring.
A potential shock hazard exists if contact is made with the exposed wiring.**

Warning

**Use care in handling the unit. Personal injury can occur through improper handling.
Take proper care to avoid accidentally dropping the unit.**

Warning

Unauthorized disassembly of the unit will void the warranty.

Warning

Shipping the gauge with the batteries inside is not recommended.

Caution

Charging the gauge overnight or unattended is not recommended

Caution

Turn the unit off when not in use and during transport.

Caution

**Be sure not to switch standardization plates with other gauges. Check the
Serial Numbers located on the gauge and on the plate to be sure they match.**

Operating Requirements

Temperature: -4° to 104° F (-20° to 40° C)

Relative Humidity: 10% to 90% noncondensing

Note: Exposing the equipment to high altitude OR extreme temperature
may reduce life of the equipment.

Disclaimer: TransTech reserves the right to change or modify product design, construction, specifications, or materials without prior notice and without incurring any obligation to make such changes and modifications on TransTech products previously or subsequently sold.

Controls and Components

Contents

The PQI 380 is packaged and shipped with the following components. Contact TransTech Systems Inc. Customer Service if any of the parts are missing.

- PQI380 unit
- Storage/shipping case
- Operators Quickstart Guide
- PQI handle
- 120/220V AC to 12V DC battery charger
- 12V DC Car Charger
- 3 battery packs

Gauge Features

External/Internal Controls

External controls on the PQI 380 consist of an ON/OFF switch and 480x640 VGA touch screen display for navigating through the user interface and entering alpha/numeric data.

Be sure not to drag your finger from one button to the next. A firm yet light touch is all that is needed to navigate from screen to screen.

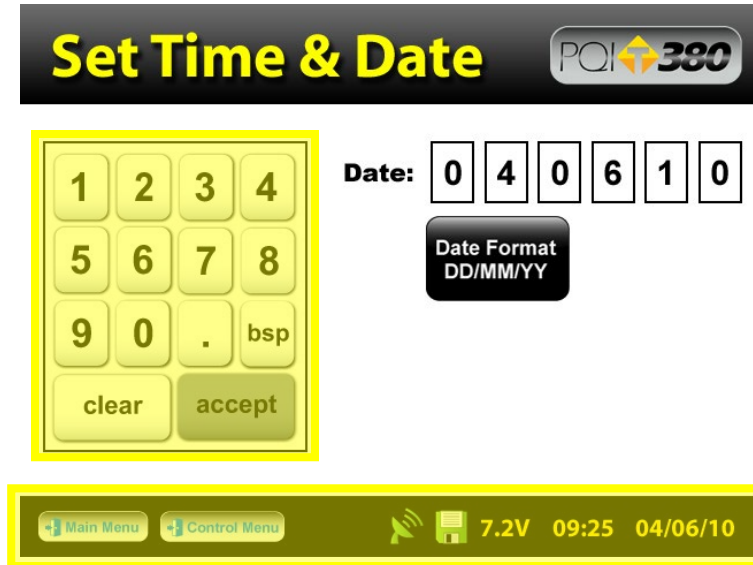

Unique yet consistent icons are located on most screens for easy one touch navigation. When data input is required of the operator the screen will display the above keyboard. Toggle from upper to lower case letters using the **Shift** button . The upper case keyboard gives the option of a **minus sign** while the lower case keyboard gives the **plus sign** . Once editing is completed simply **Press Enter** to store and return to the previous screen.

External/Internal Controls

The numeric keypad as shown in this example allows for only numbers and a decimal point.

Press **Accept**  to store your entry and in most cases return to the previous screen.

The **Status Bar** is located at the bottom of the screen (excluding the keyboard screens) and will continuously update the remaining voltage of the batteries while displaying the date, time and status of the GPS and Data Logging features.

Setting up the PQI 380

Prior to using the PQI 380 for the first time the gauge will need to be configured to make measurements and record data correctly.

The following steps must be completed before operating the PQI 380:

1. Installing and Charging the Batteries
2. Starting the Software
3. Set the Local Time/Set Date
4. Set up the GPS
5. Select Units of Measurement
6. Select Data Logging
7. Define the material being tested (Mix Details)
8. Project Details (for the Data Logging Feature)
9. Select Measurement Mode

Installing/Charging the Batteries

You will find a plate on the back of the PQI 380 with 4 spring loaded bolts.

- Turn each bolt approx. 2 full turns until the spring releases
- Remove the plate from the gauge
- Next you will find a wire with a connector, disconnect the battery from the gauge
- Then pull the nylon strap to slide the battery out of the compartment.

(Do Not pull the battery by the connector wire, doing so could cause damage to the battery)

Plug the gauge in and allow the LED to go from red to green for a full charge.
Approximate charge time is 4 hours.

To charge the unit, proceed as follows:

- 1) Turn the PQI380 unit OFF.
- 2) Connect the charger to the charger connector located on the back of the PQI380.
- 3) Plug the charger into a standard AC outlet.
- 4) The red indicator lamp will turn green to indicate that the batteries are charged.
- 5) Unplug the charger from the power source before disconnecting the charger from the PQI380.

Installing/Charging the Batteries

Battery voltage can be viewed on the Status Bar located at the bottom of all screens. A fully charged battery will display **over 8 volts**. The battery voltage will decrease as the PQI 380 is used. A low battery icon will be displayed at approximately **6.5 volts**.

The gauge will continue to operate until the battery can not supply enough voltage to complete a measurement. Once this happens, the gauge will automatically shut down and will not restart until charged. Depending on the condition of the batteries, once the voltage drops below 6 volts, the gauge may be able to take about 12 to 15 additional readings. It is important to re-charge the battery after each use.

Starting the Software

Turn the PQI 380 on by pressing the ON button. After a few seconds the TransTech splash screen will appear followed by the Main Menu Screen. The Main Menu screen will display six options. **Start PQI380**, **Internet (Coming Soon)**, **Calculator**, **Contact TransTech**, **GPS Control** and **Update Software**.

Main Menu

Start button when pressed will open the Control Menu Screen.

The Internet button when pressed will open a new screen. The new screen indicates that this will be an option in the future. It is not active at this time.

The Calculator button when pressed will open a screen which functions as a calculator.

The Contact button when pressed displays TransTech and distributor contact information.

The GPS Control button when pressed will open a screen which will allow you to enable or disable the GPS.

The Update Software button will be used in the event that TransTech releases an update to the software

Local Time and Change Date Format

You may set the date and time in two locations. From the **Main Menu**, Press **Set Time & Date**  located on the **status bar** or from the **Control Menu** press **Date & Time** .

Local Time and Change Date Format

Set Time & Date PQI 380

Set Time Time: 0 9 2 5

Set Date Date: 0 4 0 6 1 0

Date Format DD/MM/YY

[Main Menu](#) [Control Menu](#) 7.2V 09:25 04/06/10

Set Time & Date PQI 380

Time: 0 9 2 5

[Main Menu](#) [Control Menu](#) 7.2V 09:25 04/06/10

To set the date, Press **Set Date**. **Set Date** The date will display in either the DD/MM/YY or MM/DD/YY format which may be toggled from the button located on both screens. **Date Format MM/DD/YY** As you did with the time, press the appropriate numbers for the date in the format chosen. Press **Accept** **accept** to store and return to the previous screen. (Note: Date will be preset by the factory)

Setup the GPS

Setting up the GPS is nothing more than turning it on and waiting to connect to satellites. It takes approximately 15 minutes to connect to satellites depending on your location.

From the **Main Menu**, Press **GPS CONTROL**.  GPS status can be toggled ON or OFF.  

When the GPS is **ON** the satellite dish on the status bar turns from red to green.  

GPS formatting can also be toggled from the **Universal Transverse Mercator (UTM)** grid to **Latitude/Longitude (LAT-LON)**. Initially the display will read **Sats 0** for both formats until connections have been made. The above examples show a connection to five satellites (Sats 5) in both formats. GPS locations will appear on the bottom left corner of all Reading Mode screens and will store with each reading when Data Logging is ON.

Control Menu

From the **Main Menu** Press **Start PQI 380**

to obtain the **Control Menu**. From this menu, you will find the icons listed below.

Opens the project details screen

Opens the modes screen. Here you can select, Single, Average, Continuous or Segregation modes

Starts the standardization process

Opens the units screen. Here you can toggle, kg/m³-lbs/ft³, F°-C°, in-mm, %voids-%compaction

Opens the mix details screen

Opens the date and time screen

Opens the diagnostics screen

Opens the datamanagement screen. Here you can delete, download and print job files

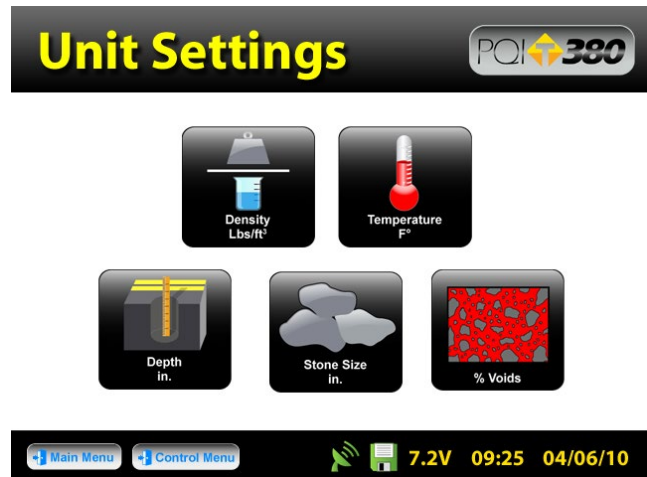

Opens the datalogging settings screen, toggle datalogging on/off

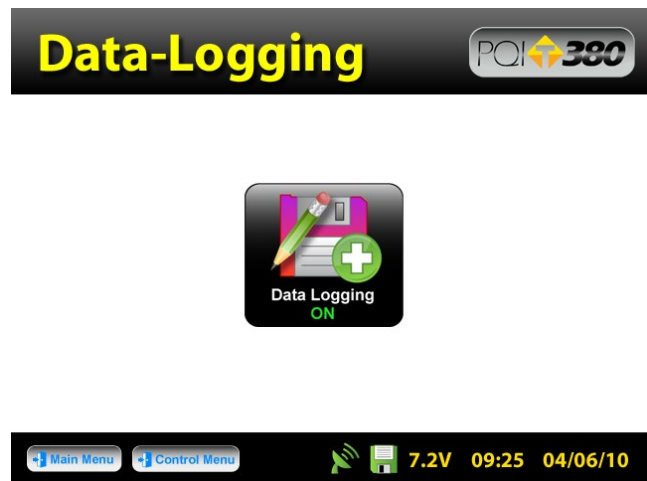

Starts the measurement process

Select Measurement Units

From the **Control Menu**, Press **Units**. Density, Temperature, Depth, Stone Size and Voids can be toggled independently between **System International (SI “metric”)** and **U.S. Customary Units**. For example, you can set your Density, Temperature and Depth in lb/ft³, °F and inches respectively while the stone size is set for millimeters. Press **Control Menu** on the taskbar to return to the Control Menu.

Data Logging

From the **Control Menu**, Press **Data Logging**. If you wish to save your data, you must activate the Data Logging feature by toggling the button to **ON**. The floppy disk on the status bar will turn from red to green when data save is ON.  

Data will not save for Continuous or Segregation Reading Modes. Data stored includes all Project and Mix details, as well as the Compaction, Density, Temperature, Date and Time of each reading. If the GPS is on and it is connected to satellites, the location in the format chosen as well as GPS date and GPS time for each reading will also be recorded.

Mix Details

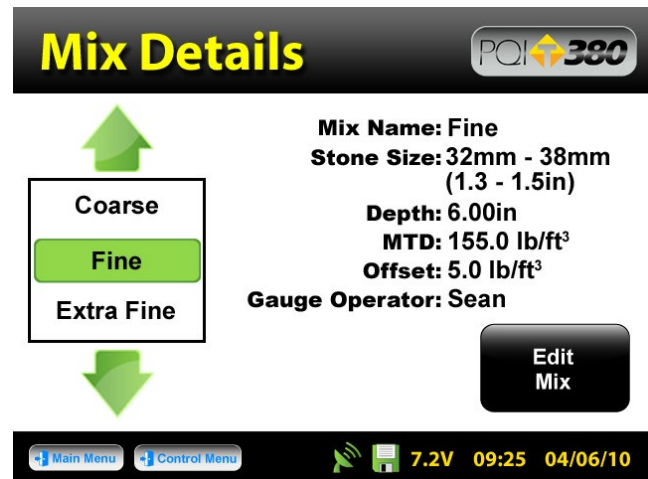

The density determined by the PQI 380 is highly material dependent so it is extremely important that the mix information for each mix design are input accurately into the gauge.

Note: Readings taken prior to accurately setting up the Mix Details section of the gauge will result in incorrect density and compaction results.

The PQI 380 is configured to store 20 unique mixes that are identified by user entered descriptions. If 20 mixes have been defined in the PQI 380 and a 21st mix is required, one of the original 20 will need to be modified to reflect the mix details of the new mix design. The details of the new mix will need to be input by editing the details of a previously defined mix. Once the old mix details are overwritten with new information, the old information is gone and the new information is saved in the gauge. Previously stored data files with the old mix information, however, will not be overwritten.

The default mixes stored in a new PQI 380 will have generic mix names (i.e. Mix1, Mix2, etc), the stone sizes will all be set to 9.5mm (0.375in.) at a depth of 5 inches with a Maximum Theoretical Density (MTD) of 125 lb/ft³. **Readings taken prior to editing the default information on a mix that does not resemble the default information will result in incorrect density and compaction.**

Editing Mix Details

From the **Control Menu**, Press **Mix**  for the **Mix Details** screen. The mix highlighted in green on the left is displayed in detail on the right. To edit the details of this mix, Press **Edit Mix**.

back space	space	shift	clear	enter					

Press **Operator**.  Enter your name as the operator of the gauge, Press **Enter**.  The gauge will return to the **Edit Mix screen**. Verify and change any information from this screen. Once verified, Press **Exit**. 

Editing Mix Details

After pressing Exit, the gauge will display the **Mix Detail** screen. Here you may use the green up or down arrows   to select a new mix for editing or change an existing mix. **The green highlighted mix is the CURRENT MIX**  **that the gauge will use when taking readings. Prior to exiting this screen, be sure this is the mix you want and the information to the right has been verified.** Press

Control Menu  on the Status Bar to return to the **Control Menu**. If the gauge is shutdown, the current mix prior to shutdown will remain the current mix when started back up.

Project Details

The PQI 380 is configured to store 10 unique projects that are identified by user entered descriptions. If 10 projects have been defined in the PQI 380 and an 11th project is required, one of the original 10 will need to be modified to reflect the new project. The details of the new project will need to be input by editing the details of a previously stored project. Once the old projects are overwritten with new information, the old information is gone and the new information is saved in the gauge. Previously store data files with the old mix information, however, will not be overwritten.

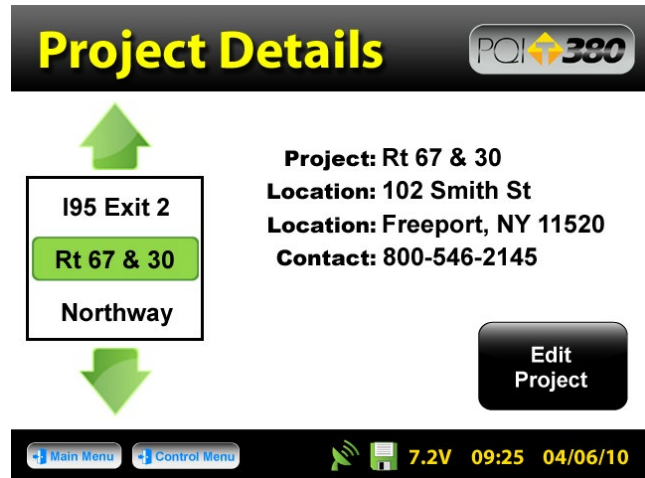

You may revisit each Project at any given time to continue taking readings. Data from readings taken within each project will store in the order of which they were taken. If mix details change within a project (i.e. offset, stone size, etc) or project details are added, data for readings taken after the changes will continue to store on the same dat file in the order of which they were taken. Only by changing the Project Name itself will the data be stored on a separate dat file.

The default Projects stored in a new PQI 380 will have generic Project names (i.e. Project1, Project2, etc) along with generic Project details (i.e. My Street, My Road, Contact). Project Detail screens will resemble the Mix Detail screens such that you are able to select your Project using the up and down arrows.  

The green highlighted project is the **CURRENT PROJECT**.  Readings taken will store on a dat file using the **CURRENT PROJECT NAME**. If the gauge is shutdown, the current project prior to shutdown will remain the current project when started back up.

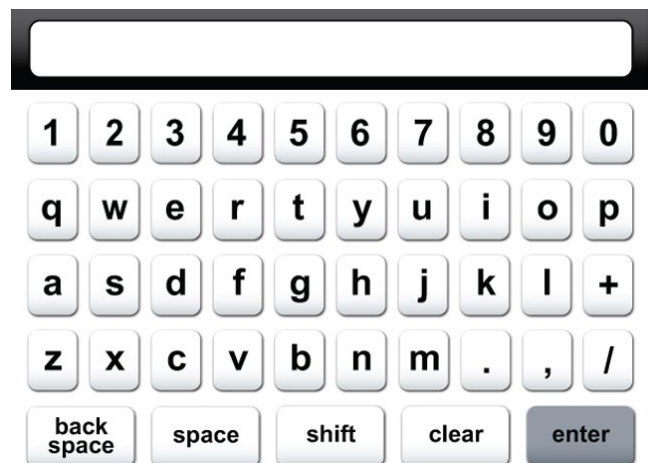

Editing Project Details

Edit
Project

From the **Control Menu**, Press **Project**  for the **Project Details** screen. The project highlighted in green on the left is displayed in detail on the right. To edit the details of this project, Press **Edit Project**.

Operator:

    7.2V 09:25 04/06/10

If data logging is ON and you wish to save the displayed average reading, Press **Accept**.  As with the Single Mode, the **Enter Location** screen appears to allow specific information to be stored for that location. Press **Accept**  immediately to bypass this screen or when editing is complete.

Continuous Reading Mode

Data will **NOT** store for this mode. To begin taking readings, Press **Measure**.

Push **Measure** Button to start reading

Compaction: 95%
Density: 134lbs/ft³
Temperature: 234°

Push **Stop** Button to stop reading

Compaction: 95%
Density: 134lbs/ft³
Temperature: 234°

Once the **Measure** button has been pressed, the Continuous mode will continuously display and update the Compaction, Density and Temperature until the **STOP** button  is pressed.

Segregation Reading Mode

Data will NOT store for this mode. Be sure to write down the individual readings, if you must make note of them. This mode mimics the PQI 300's where two readings ('A' and 'B') are taken for each location.

Segregation is the separation of the course and fine aggregate particles in the asphalt mix. A segregated mix will usually result in density fluctuations in the finished mat. The PQI 380's Segregation Mode can be used to conveniently measure the density variations that result from mix segregation. The operation of Segregation Mode is patterned after test procedures used by a number of testing organizations. The PQI 380 is used to take a number of readings at pre-determined locations on the mat and the variations in the readings are calculated after all readings have been taken.

Push **Measure** Button to begin segregation

1A

Push **Accept** or **Reject** to continue to next reading

Compaction: 95%
Density: 134lbs/ft³
Temperature: 234°

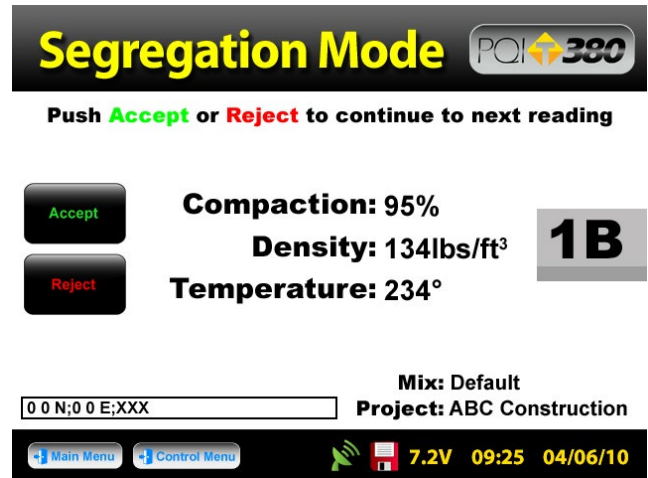

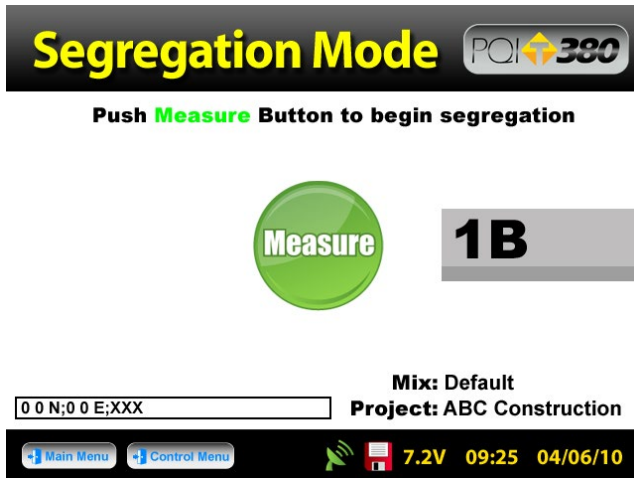

1A

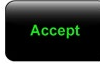

Segregation Reading Mode

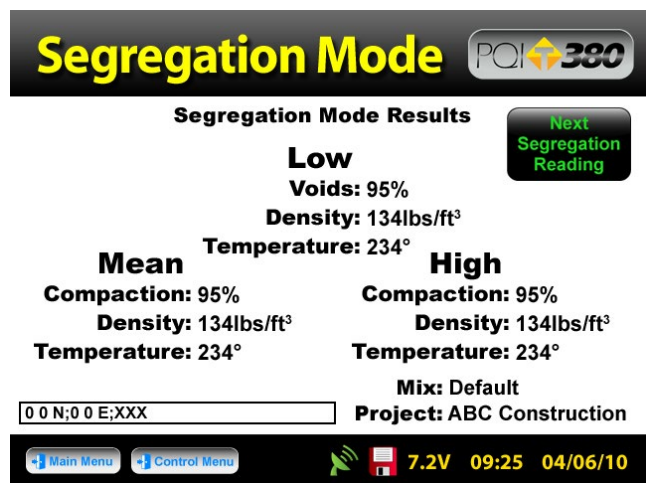

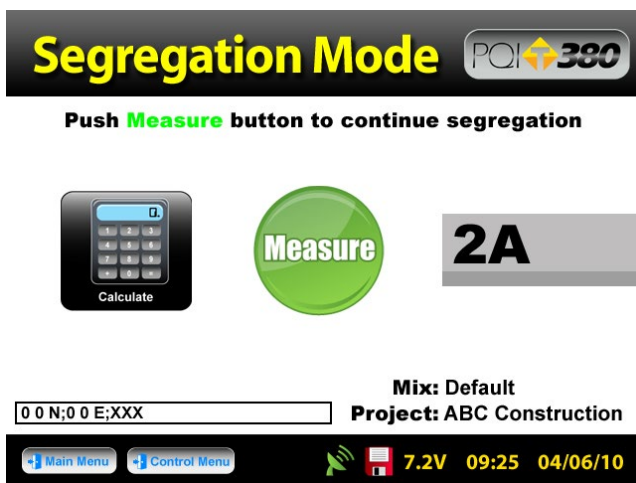

Position the PQI 380 on the first pre-determined location on the mat and Press **Measure**  to obtain reading **1A** **1A** for location 1. **If needed, write down the results of the reading at this time.** For every reading taken, the option to **Accept**  or **Reject**  will be given as shown in the example. Two readings ('A' and 'B') are taken at each location and the average value is used. Taking the average of two readings is required for nuclear gauges, which exhibit poor repeatability. The PQI 380 has excellent repeatability so two readings should not be required, but two readings are taken for compatibility with existing nuclear test procedures. If satisfied with the first reading, Press **Accept**. 

The PQI 380 will prompt you to take the next reading in the same location, **1B**. **1B**

Press **Measure**.  Results of reading **1B** for location 1 will display and wait to be accepted or declined.  

If satisfied with the second reading write down the results (if needed), Press **Accept**.  The PQI 380 will then show a "Calculate"  button and prompt for reading 1 at location two (**2A**). After the last pair of readings has been accepted, Press **Calculate**.  The gauge will display %Compaction, Density and Temperature for the lowest, highest and mean readings.

Calibration

The calibration of the PQI 380 to each new mix is necessary for accurate and consistent readings. This is due to the various HMA mixtures being used in the field today. Changes in the aggregate type and size as well as changes in the binders produce a wide variety of electrical properties. Once calibrated to a standard (core) the PQI 380 will maintain optimal precision and accuracy.

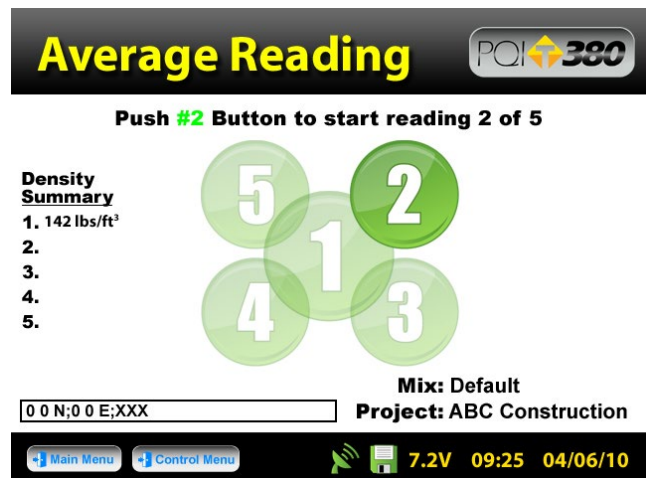

Core Calibration Method

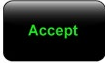

For optimal results, the **core calibration method** is the most accurate method when calibrating the PQI 380. The level of quality control from the plant to the mat will determine the number of test locations an operator should identify (one to five). The standard method for establishing a control strip as specified in **AASHTO TP 68-04** would be a total of five core locations. Remember the calibration will only be as good as the cores they are calibrated to. Therefore, the more test locations you have the more accurate the results.

Place the PQI 380 in the first location on the asphalt mat. Using the sensor plate as a guide, draw a circle around the PQI with a crayon marker. Using the **Average Mode** on the PQI, Press 1  for the first reading.

(DO NOT TOUCH OR HOVER OVER THE PQI WHILE IT IS TAKING A READING)

The PQI 380 does NOT store individual readings, only the average reading will be stored when Data Logging is ON. 

Move the PQI approximately 2 inches up and to the right on the outside of the circle. The Average Reading Mode screen will also guide you to the proper location and reading number. Press 2  to take the second reading. Continue through the clover leaf pattern until you have completed five individual readings. After the fifth reading, the PQI 380 will display all five individual readings for verification under the Density Summary portion of the screen. **If individual readings are needed write them down, this will be the last time the screen will display them.** The average of these five individual readings will display in the center of the display waiting for an **Accept**  or **Reject**  button to be pressed. Write down the average PQI 380 reading on the “**Core Comparison Calibration Work Sheet**” located at the back of this manual. Press **Accept**  to store the average reading on the data file. If the option to **Accept** or **Reject** does not display then Data Logging is **OFF**  and the average reading will not store.

Calculating the Offset

Direct percent compaction of the test mat is achieved by pulling physical samples (cores) from the locations previously tested. Once the core density lab reports are received enter the value for each core on the “**Core Comparison Work Sheet**”. Calculate the difference between the average PQI readings and the core density values. The five calculated differences (Core Density – PQI Average Density) will then be averaged to obtain one difference. This difference will be the **Offset** for that specific mix that will be stored in the gauge for that mix. Therefore, you will be Adjusting the Value of the PQI readings by that amount in order for the gauge to read the same as the core(s).

If you do not have a calculator handy, Press **Main Menu** on the taskbar.  From the Main Menu, Press **Calculator**.  Once the numeric difference is calculated, determine whether the PQI 380 is reading **too high** or **too low**. For example, if the PQI reads 155lb/ft³, and you would like it to read 150lb/ft³, the PQI reads **too high** and the Adjusted Value for the **Offset** is 5.

PQI380 Offset Setup

Offset:

From the **Main Menu** Press **Start PQI380**,  then from the **Control Menu** Press **Mix**. 

PQI380 Offset Setup

Stone Size: 32mm-38mm (1.3 - 1.5in)
Depth: 6.00 in
MTD: 155.0 lb/ft³
Offset: 0.0 lb/ft³
Operator: Sean

Main Menu Control Menu

  7.2V 09:25 04/06/10

The Adjusted Value and New Offset will be the same if the Current Offset was originally zero. If the Current Offset had been **1** and the Adjusted Value **5**, then the New Offset would be **-4** for a PQI reading that had read **too high**. Press **Accept**.  The screen returns to the **Edit Mix** screen where you can verify the information for that mix. Once verified, Press **Exit**  and then press **Control Menu**  on the taskbar to return to the **Control Menu**.

The Offset for each mix can be adjusted at any time. Readings taken prior to a specific adjustment will not reflect that adjustment. Data files will record each offset used to calculate density for each reading.

Data Management

The **Data Management** screen is where you can **download** and **delete** project files. From the **Control Menu**, Press **Data Management**.  In the **Data Management** screen you will see six buttons...

Data Management 

Data Files

Up Down

Main Menu Control Menu

  7.2V 09:25 04/06/10

-  Scroll Up
-  Scroll Down
-  Print Data File (Not Available at this time)
-  Download Data File
-  Delete Data File
-  Displays details of the Data File (Not Available at this time)

Downloading Data

From the **Control Menu**, Press **Data Management**.

Scroll down to the Project you would like to

download using the arrows   located at the top left corner of the screen. Insert the USB flash drive

into the USB port located on the back of the gauge. Press **Download**  and **Download** again. Downloading is complete when the gauge displays “**Ready**”  in the top right hand corner. When and if you wish to **delete** a Project, be sure to highlight the correct project and Press **Delete**.  Printing options are not yet available.

Download the data onto your computer

Open an Excel spreadsheet and import the data by clicking **Import External Data** from the **Data** menu then click **Import Data**. Change the **Look In folder** to the location you stored your data as well as changing the **Files of Types** to **All Files**. Highlight and open your data file (ex. Project1.pqidat). Check **Delimited**, Click **Next**, Check **Tab**, Check **Semicolon**, Click **Finish**. Highlight the beginning cell and Click **OK**.

Column headings and data for each individual reading include the following: from Project Details: Project Name, Location 1, Location 2, Contact; from Mix Details: Mix Name, Stone Size, Depth, MTD, Offset, Gauge Op; Station Information: Station Name, Station Offset, Description, Operator; Density, Compaction, Surface Temperature, GPS location, GPS time, GPS date, PQI380 Date/Time.

Power Save/Auto Shut Down

The PQI Model 380 has a built in power saving mode. If there are no buttons pressed after approximately 20 minutes the unit will go into a power saving mode. Pressing any key will “Wake” the PQI up for continued use. If the PQI is left “On” for an hour without any buttons being pressed, it will shut itself down, to conserve battery run time.

Maintenance and Troubleshooting

The PQI has been designed to require a minimum of maintenance or service. Normal care in use should insure long and trouble free operation.

Keep the PQI bottom surface clean and dry:

For accurate readings, the PQI should have a clean, dry, smooth interface with the mat. Therefore, you should wipe the PQI sensor plate surface dry and clean after each reading. Also, before placing the PQI on the mat, you should check the surface of the mat to make sure there is no loose material on the surface, which would prevent the PQI from seating properly. If a buildup of asphalt begins to form on the sensor plate surface, clean the surface with WD-40.

Touchscreen:

Do not clean the touchscreen with abrasive products. Apply window cleaner to a soft rag and wipe the surface clean.

Factory Calibration:

Yearly recalibration of the gauge is needed to maintain consistency and accuracy for the electronic components.

The **Diagnostic** button  on the **Control Menu** will turn red as a reminder. Only authorized distributors or the factory are able to perform this type of calibration.

Troubleshooting

The chart below provides guidance to a few suspect conditions.

Battery Problems	Check orientation of batteries – be sure the plus side button is sticking out of the gauge (cap side) Check battery cap- be sure they are screwed on evenly and fully Call Factory
Data is not recording	Check Data Logging- the floppy disk on the status bar should be green, Data Logging should be On. Check Current Project Name- data readings will store on the Current Project only, be sure you have the correct Project name set on the gauge (Verify the name of the Project and Mix on each reading screen)
GPS Communication Errors	Call Factory
Buttons Sticking/Frozen Software	Repress the frozen button firmly for three seconds. Be sure not to drag your finger from one button to the next. If this does not work, reset the gauge by turning it off and then back on.
Incorrect Density Reading	Clean off sensor plate Check Current Mix Details -be sure you have selected the proper aggregate size and entered all details correctly Check Calibration- check your calculations for the Adjusted Value of the offset and that it was entered correctly Call Factory

Diagnostics

In the event that the PQI continues to malfunction an internal diagnostics mode can be activated to provide necessary technical information to the factory. In the event that a repair is required, it is strongly recommended that authorized factory service be obtained. Unauthorized repair or maintenance by the user during the warranty period will void the unit's warranty.

The Calibration Reset button  is located in the diagnostics screen. Pressing the calibration reset button will cancel the calibration warning for 30 days. It is recommended that the gauge be calibrated when this warning is displayed.

Standardization

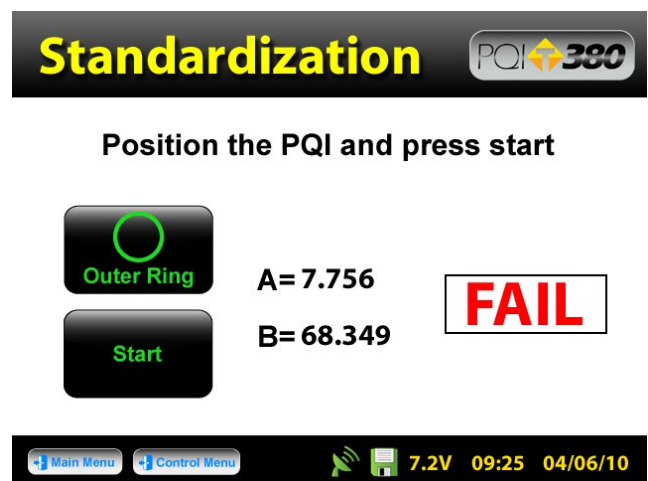

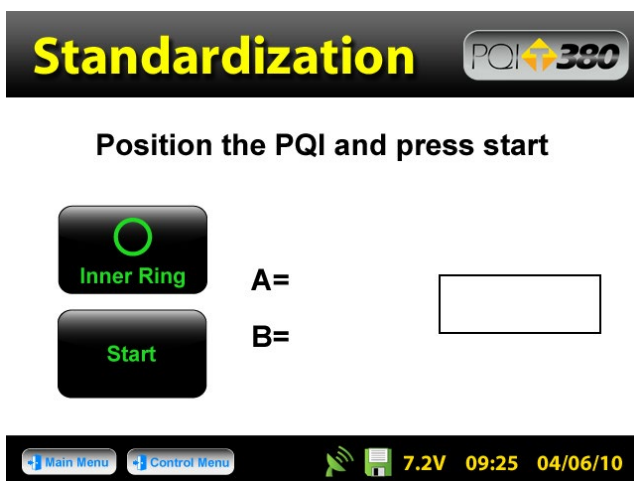

Standardization of the gauge should be performed at the operator's discretion. If at any time you would like to verify the consistency of the readings for the PQI 380, you can do so by performing a standardization test from inside the carry case. Located at the bottom of the case is a steel plate. Position the gauge on top of the plate inside the case. **Be sure the gauge screen is facing you, if it is placed in the case backwards the handle will get hung up and you will get a false reading.** The case should not be on top of or around (10ft.) any large metal objects. Turn the gauge ON and proceed to the **Control Menu**.

Press **Standardization**,  to obtain the above screen. Press **Start**,  the result should read **PASS**.  Press **Inner Ring**,  the status should change from “Inner” to “Outer”.

Press **Start**,  again to receive another **PASS**.  If, however, the result indicates a **FAIL**  for either or both tests, call TransTech or your Distributor.

WARNING: THE STANDARDIZATION OF THE PQI 380 WILL ONLY WORK WITH THE PLATE IT HAS BEEN ISSUED TO. IF YOU RECEIVE A FAIL RESULT, CHECK TO BE SURE THE SERIAL NUMBERS LOCATED ON THE GAUGE AND THE STANDARDIZATION PLATE ARE THE SAME.

WARNING: THE STANDARDIZATION OF THE PQI380 MAY GIVE A FALSE “FAIL” IF TEST IS TAKEN TOO CLOSE TO METAL OBJECTS, POWER LINES OR OTHER ELECTRICAL DEVICES THAT MAY BE TOO CLOSE TO THE GAUGE. TURN THE GAUGE OFF AND MOVE THE GAUGE ATLEAST 10 FEET FROM THESE OBJECTS. IF AFTER THESE PRECAUTIONS ARE TAKEN THE GAUGE STILL DISPLAYS A “FAIL” CONTACT YOUR DISTRIBUTOR.

Warranty

The Company warrants to the Purchaser that the product delivered hereunder will be free from defects in material or workmanship and be the kind and quality designated or specified in the contract or purchase order. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by the Company.

If the product delivered hereunder does not meet the above warranty and if the Purchaser promptly notifies the Company, the Company shall thereupon correct any defect, including nonconformance with the specifications, either (at the Company’s option) by repairing any defective or damaged parts of the product, replacing the product, or by making available the necessary repaired or replacement parts.

The liability of the Company under this warranty, for any loss, whether the claim is based on contract or negligence, shall not in any case exceed the cost of correcting defects in the product as herein provided, and upon the expiration of the warranty period, all such liability shall terminate. The foregoing shall constitute the exclusive remedy of the Purchaser and the exclusive liability of the Company. The foregoing warranty is exclusive and in lieu of all other warranties, whether written, oral, implied or statutory.

No warranty of merchantability or of fitness for purpose shall apply. Unauthorized service shall void this warranty.

Factory authorized service and replacement items may be obtained directly from TransTech’s factory or through an authorized representative (see TransTech’s website for a complete list of distributors www.transtechsys.com).
